DETAILED ACTION

1. The abstract of the disclosure is objected to because the words "thereby" (see lines 2 and 9) and "thereof" are legal phraseology. Correction is required. See MPEP § 608.01(b).

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-4 and 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gamo et al. in U.S. Patent No. 4,843,203 in view of Ohashi in Japan Patent No. 4-105,820 and Inoue in Japan Patent No. 63-120,030. Gamo et al. discloses a wire cutting electric discharge machine and in column 2, lines 10-34 further discloses using different offsets for the upper and lower wire guides to perform taper machining. Ohashi teaches a storage means (element 82) for storing corrective amounts in memory and

motion path determining means (elements 80,81) based in part upon the wire electrode diameter. Inoue teaches compensating for the amount of wire electrode consumption by adjusting the correction value using the tangent of an angle (see pages 2 and 3 of Inoue) in order to prevent a straightness error of the wire electrode. It would have been obvious to adapt Gamo et al. in view of Ohashi and Inoue to provide this to more accurately machine the workpiece.

5. Claims 5 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kinoshita et al. in U.S. Patent No. 4,703,146 uses auxiliary data to compensate for the exact wire diameter.
